

TARUN SAINI

+91-9785642343 — taruns7563@gmail.com — LinkedIn — GitHub — Portfolio

PROFESSIONAL SUMMARY

Results-oriented AI & Data Science graduate (B.Tech) with hands-on expertise in Python, SQL, Power BI, Tableau, and machine learning. Proficient in data wrangling, feature engineering, predictive modelling, statistical analysis, and KPI reporting.

EDUCATION

Modern Institute of Technology & Research Centre, Bikaner

B.Tech — Artificial Intelligence & Data Science — CGPA: 7.99

Rajasthan Technical University

2021 – 2025

SKILLS

Programming Languages: Python, R, SQL, NoSQL, VBA

Databases: MySQL, MongoDB

Frameworks / Libraries: Streamlit, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn (Supervised & Unsupervised Learning)

Dashboards & Reporting: Power BI (DAX), Tableau, Advanced Excel (Pivot Tables, VBA Macros, Conditional Formatting)

Analytics Competencies: ETL Pipelines, Data Wrangling, Feature Engineering, Statistical Analysis, Predictive Modelling, KPI Reporting, A/B Testing, Data Storytelling, Model Evaluation Metrics, Cross-functional Collaboration

Languages: English, Hindi

PROJECTS

Fraud Detection Model | *Python, Scikit-learn, Power BI, Streamlit* | GitHub

- Built ETL pipelines on 6.36M transactions; achieved 94% accuracy using Logistic Regression with Scikit-learn, evaluated via precision, recall, and F1-score.
- Deployed a real-time Streamlit web app for live fraud detection with instant transaction classification.
- Created a Power BI dashboard with DAX and Python to visualise fraud patterns and risk KPIs for stakeholders.

Uber Trip Analysis | *Power BI, DAX, ETL* | GitHub

- Built ETL pipelines to wrangle raw trip data across 3 Power BI dashboards tracking KPIs — Bookings, Revenue, Avg Distance & Duration for stakeholder reporting.
- Implemented DAX dynamic measures, heatmaps, conditional formatting, and drillthrough analysis across payment types, trip types, and locations.
- Identified top pickup/drop-off hotspots, peak intervals, and vehicle preferences — supporting driver allocation and dynamic pricing decisions.

E-Commerce Analytics | *Python, Pandas, Tableau, ETL* | GitHub

- Used Python (Pandas) and ETL pipelines for data wrangling — handling missing values, duplicates, and inconsistencies to produce reporting-ready e-commerce data.
- Built an interactive Tableau dashboard tracking KPIs — Total Revenue (10.6M), Orders (19K), Customers (4.3K), monthly revenue trends, and global revenue map across countries.
- Delivered insights on Top 10 customers & products, revenue by country, and return rate — supporting data-driven decisions for sales and marketing teams.

CERTIFICATIONS

Data Analytics Professional Certificate

Ducat IT Training Institute, South Delhi

Mar 2025 – Feb 2026

Deep Learning & NLP
