SKILLS

Programming Languages:-

Python, R, NoSQL, SQL, VBA

Databases:-

MySQL, MongoDB

Frameworks/Libraries:-

Streamlit, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn – Supervised & Unsupervised Learning

Dashboards & Reporting:-

Advanced Excel, Power BI (DAX), Tableau

Analytics Competencies:-

ETL Pipelines, Data Wrangling, Feature Engineering, Statistical Analysis, Predictive Modelling, KPI Reporting, A/B Testing, Data Storytelling, Model Evaluation Metrics, Cross-functional Collaboration

LANGUAGES KNOWN

English (Both)

Hindi (Both)

CERTIFICATIONS

- Data Analytics Professional Certificate – Ducat IT Training institute

Tarun Saini

Results-oriented AI & Data Science graduate (B.Tech, 7.99 CGPA) skilled in data wrangling, predictive modelling, KPI reporting, and data storytelling. Deployed a 94%-accurate fraud detection model on 6.36M transactions and built multi-dashboard BI suites in Power BI & Tableau. Seeking entry-level Data Analyst / BI Analyst roles in Delhi NCR or remote.

PERSONAL DETAILS

Current Location	South Delhi
Date of Birth	March 22, 2003
Gender	Male

EDUCATION

Graduation

Course	B.Tech / B.E. (Artificial Intelligence and Data Science)
College/University	Modern Institute of Technology & Research Centre, Bikaner Technical University, Rajasthan
Score	7.99 CGPA

Schooling

	Class XII	Class X
Board Name	Rajasthan	Rajasthan
Medium	English	English
Year of Passing	2021	2019
Score	90.4%	74.17%

PROJECTS

Fraud Detection with 94% accuracy model :- [Github link](#)

- Built ETL pipelines on 6.36M transactions; achieved 94% accuracy using Logistic Regression with Scikit-learn, evaluated via precision, recall & F1.
- Deployed a real-time Streamlit app for live fraud detection with instant transaction classification.
- Created a Power BI dashboard with DAX & Python to visualise fraud patterns and risk KPIs for stakeholders.

Uber Trip Analysis :- [Github link](#)

- Built ETL pipelines to wrangle raw trip data across 3 Power BI dashboards tracking KPIs — Bookings, Revenue, Avg Distance & Duration for stakeholder reporting.
- Implemented DAX dynamic measures, heatmaps, conditional formatting & drill-through analysis across payment types, trip types & locations.
- Identified top pickup/drop-off hotspots, peak intervals & vehicle preferences — supporting driver allocation and dynamic pricing decisions.

E-Commerce Analytics :- [Github link](#)

- Used Python (Pandas) & ETL pipelines for data wrangling — handling missing values, duplicates & inconsistencies to produce reporting-ready e-commerce data.
- Built an interactive Tableau dashboard tracking KPIs — Total Revenue (10.6M), Orders (19K), Customers (4.3K), monthly revenue trends & global revenue map across countries.
- Delivered business insights on Top 10 customers & products, revenue by country & return rate — supporting data-driven decisions for sales and marketing teams.
